

BOMB-Community 1.5ml - AUS magnets

This rack designed by BOMB community contributor Quentin Gouil represents a new version of the 3D printed “BOMB microtube rack” adjusted to fit *Neodymium Block - 12 mm x 5 mm x 2 mm / N52 Magnets*.

These specific magnets are available for purchase in Australia and the USA as well as some other nations from “AMF magnets” (not affiliated with BOMB.bio in any way).

The rack is intended to be 3D printed with the Magnets being glued in place.

The finished rack can hold up to 8x 1.5-2ml reaction tubes.
